

CURRENT RESEARCH TOPICS IN PHARMACY: *Microbiology Debates*

December 14th, 2022 14.00 PM ISTANBUL

FOR REGISTRATION:

First Session- Moderator: Büşra ERTAŞ 14.00-15.45 PM

Welcome- Assoc.Prof.Esra TATAR

Bacteriotherapy – Dr. Zahraa AMER HASHIM
Mosul University, Mosul, Iraq

Antibiotic resistance – Assist.Prof. Pervin RAYAMAN
Marmara University, Istanbul, Turkey

The vaccination in Albania : An assessment of the level of knowledge and behaviour of the population regarding vaccines.- Assoc.Prof. Mirela MIRAÇI
University of Medicine, Tirana, Albania

Chicken contamination with thermotolerant Campylobacter in Tunisia: Antibiotic resistance and virulence profiling –Dr.Awatef BEJAOU
Institut Pasteur de Tunis, Tunis, Tunisia

Second Session- Moderator: Esra TATAR 16.00-17.45 PM

Plant phenolics and their synthetic derivatives as inhibitors of *Helicobacter pylori* : Suggestion for a new mechanism of action -
Assoc.Prof. Simone CARRADORI
"G. d'Annunzio" University of Chieti-Pescara University, Chieti Italy

Pomegranate rind extract with Zn (II) combination as a new therapeutic agent for oral care products- Dr.Vildan ÇELİKSOY
Cardiff University, Cardiff, UK

The antimicrobial effects of honey and other bee-derived products- Dr.Saira KHAN
Cardiff University, Cardiff, UK

Chair

Prof. Hatice Kübra ELÇİOĞLU

Vice Chairs

Prof. Levent KABASAKAL & Assoc. Prof. Esra TATAR

ORGANIZING & SCIENTIFIC COMMITTEE

Editorial Board of Journal of Research in Pharmacy

<https://www.irespharm.com/>

JRP

Journal of Research in Pharmacy

An international open-access journal of pharmacy and pharmaceutical sciences

Formerly published as Marmara Pharmaceutical Journal

ONLINE
SYMPOSIUM

CURRENT RESEARCH TOPICS IN PHARMACY: *Microbiology Debates*

December 14th, 2022 14.00 PM ISTANBUL

ORGANIZING & SCIENTIFIC COMMITTEE

Editorial Board of Journal of Research in Pharmacy

<https://www.jrespharm.com/>

Esra Tatar
(Vice Chair of Organizing Committee)
Marmara University, Istanbul, Turkey

Levent Kabasakal
(Vice Chair of Organizing Committee)
Marmara University, Istanbul, Turkey

Ayşe Nur Hazar Yavuz
(Secretary)
Marmara University, Istanbul, Turkey

Abdikarim Mohammed Abdi
Yeditepe University, Istanbul, Turkey

Afife Büşra Uğur Kaplan
Atatürk University, Erzurum, Turkey

Ahmet Emir
Ege University, Izmir, Turkey

Ali Demir Sezer
Marmara University, Istanbul, Turkey

Ammad Ahmad Farooqi
Institute of Biomedical and Genetic Engineering (IBGE), Islamabad, Pakistan

Ana V. Pejić
University of Kragujevac, Kragujevac, Serbia

Anisa Elhamili
University of Tripoli, Tripoli, Libya

Annalisa Chiavaroli
G. d'Annunzio University of Chieti-Pescara, Chieti, Italy

Antoaneta Trendafilova
Bulgarian Academy of Sciences, Sofia, Bulgaria

Ayfer Beceren
Marmara University, Istanbul, Turkey

Ayşe Esra Karadağ
Istanbul Medipol University, Istanbul, Turkey

Ayşenur Günaydın Akaylız
Bezmiâlem Vakıf University, Istanbul, Turkey

Bahadır Bülbül
Düzce University, Düzce, Turkey

Betul Okuyan
Marmara University, Istanbul, Turkey

Büşra Ertaş
Marmara University, Istanbul, Turkey

Ceren Emir
Ege University, Izmir, Turkey

Claudio Ferrante
G. d'Annunzio University of Chieti-Pescara, Chieti, Italy

Derya Özavcı
Marmara University, Istanbul, Turkey

Dinesh Kumar
Indian Institute of Technology (BHU), Varanasi, India

Ebru Altuntaş
Istanbul University, Istanbul, Turkey

Enkelejda Goci
Aldent University, Tirana, Albania

Entela Haloci
University of Medicine, Tirana, Albania

Erkan Rayaman
Marmara University, Istanbul, Turkey

Gizem Tatar Yılmaz
Karadeniz Technical University, Trabzon, Turkey

Gülbek Uçar
Hacettepe University, Ankara, Turkey

Gülgün Tınaz
Marmara University, Istanbul, Turkey

Gülşah Gedik
Trakya University, Edirne, Turkey

Hamide Sena Özbay
Hacettepe University, Ankara, Turkey

Hasan Erdiç Sellitepe
Karadeniz Technical University, Trabzon, Turkey

I. İrem Tatlı Çankaya
Hacettepe University, Ankara, Turkey

Kerem Buran
University of Health Sciences, Istanbul, Turkey

Klodola Dhano
Aldent University, Tirana, Albania

Lejla Klepo
University of Sarajevo, Sarajevo, Bosnia and Herzegovina

Lokman Ayaz

ANTIBIOTIC RESISTANCE

Pervin RAYAMAN 

Department of Pharmaceutical Microbiology, Faculty of Pharmacy, Marmara University, Istanbul,
Türkiye

pgocer@marmara.edu.tr

Antibiotics are medicines used to prevent and treat bacterial infections. Antibiotic resistance occurs when the response of bacteria to medicines. Unfortunately nowadays the emergence of resistance among bacterial pathogens is a major public worldwide health problem. Antibiotic resistance is a vital problem since it concerns human, animals, plants and environmental factors.

Additionally, multidrug-resistant organisms have emerged not only in the hospital but also in the community. The presence of antibiotic-resistant bacteria reservoirs outside the hospital is a worldwide issue which concerns many scientist. Moreover, according to the World Health Organization (WHO) antibiotic resistance is one of the 3 most important public health threats of the 21st century. Furthermore, according to Centers for Disease Control and Prevention (CDC) antibiotic resistance is estimated to cause around 300 million premature deaths by 2050, with a loss of up to \$100 trillion (£64 trillion) to the global economy.

As it is known the mechanisms of antimicrobial resistance are modifications of the antimicrobial target, Enzymatic degradation of antibacterial drugs, changes in membrane permeability to antibiotics, changes in important metabolic pathways, activation of efflux mechanism.

During the modifications of the antimicrobial target in order to avoid the action of the antibiotic bacteria have evolved different tactics one of which is target protection (avoiding the antibiotic to reach its binding site) and the other one is modifications of the target site which results in decreased affinity for the antibiotic molecule. For example drugs affected by this mechanism include tetracycline (Tet[M] and Tet[O]), fluoroquinolones (Qnr) and fusidic acid (FusB and FusC) during target protections. The methicillin resistance seen in *Staphylococcus aureus* due to replacement of an exogenous PBP (PBP2a) and vancomycin resistance in enterococci is an example of replacement or bypass of the original target.

The β -Lactamases, macrolide esterases and aminoglycoside acetyltransferases are take place in enzymatic degradation of antibacterial drugs. Many of the antibiotics used in clinical practice have intracellular bacterial targets. Therefore, the compound must penetrate the outer and/or cytoplasmic membrane in order to exert its antimicrobial effect. β -lactams, tetracyclines and some fluoroquinolones are particularly affected by changes in permeability of the outer membrane. Also one of the most important mechanisms of antimicrobial resistance is the activation of efflux mechanisms. Many classes of efflux pumps have been characterized in both gram-negative and gram-positive pathogens. It is known that more than 20 different tet genes cause tetracycline resistance. Additionally, MDR efflux pumps like *AcrAB-TolC* in Enterobacteriaceae and *MexAB-OprM* in *P. aeruginosa* are able to extrude tetracyclines (including tigecycline) as part of their contribution to multidrug resistance.

In order to combat with antibiotic resistance one should protect him or herself and also his or her family. As it is known infections caused by multi-drug antibiotic-resistant germs are quiet difficult, and sometimes impossible to treat. However we can help stop the spread of these microorganisms. Normally, antibiotic resistance happens when microorganisms like bacteria and fungi develop the ability to defeat the drugs designed to kill them. People can not completely avoid getting an infection, but there are few precautions that you can take in order to reduce infection risk. These are, washing hands, getting vaccinated, using antibiotics appropriately, preparing food safely, being vigilant when traveling abroad and preventing sexually transmitted diseases.

Consequently, antibiotic resistance is a worldwide problem which concerns many scientist since combating with it getting hard day by day. Merely, if the necessary precaution metioned about are taken, antibiotic resistance could be minimalized.

Keywords: Antibiotic resistance, multidrug-resistant organisms, efflux mechanisms.
