<tbody>
<tr>
<td>First Session</td>
<td>Welcome - Assoc.Prof. Esra TATAR</td>
<td>Assoc.Prof. Esra TATAR</td>
<td>University of Istanbul, Turkey</td>
</tr>
<tr>
<td></td>
<td>Bacteriotherapy - Dr. Zahraa AMER HASHIM</td>
<td>Mosul University, Mosul, Iraq</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Antibiotic resistance - Assist.Prof. Pervin RAYAMAN</td>
<td>Marmara University, Istanbul, Turkey</td>
<td></td>
</tr>
<tr>
<td></td>
<td>The vaccination in Albania: An assessment of the level of knowledge and behaviour of the population regarding vaccines - Assoc.Prof. Mirela MIRAÇI</td>
<td>University of Medicine, Tirana, Albania</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Chicken contamination with thermotolerant Campylobacter in Tunisia: Antibiotic resistance and virulence profiling - Dr. Awatef BEJAOUI</td>
<td>Institut Pasteur de Tunis, Tunis, Tunisia</td>
<td></td>
</tr>
<tr>
<td>Second Session</td>
<td>Plant phenolics and their synthetic derivatives as inhibitors of Helicobacter pylori: Suggestion for a new mechanism of action - Assoc.Prof. Simone CARRADORI</td>
<td>&quot;G. d’Annunzio&quot; University of Chieti-Pescara University, Chieti Italy</td>
<td>&quot;G. d’Annunzio&quot; University of Chieti-Pescara University, Chieti Italy</td>
</tr>
<tr>
<td></td>
<td>Pomegranate rind extract with Zn (II) combination as a new therapeutic agent for oral care products - Dr. Vildan ÇELİKSOY</td>
<td>Cardiff University, Cardiff, UK</td>
<td>Cardiff University, Cardiff, UK</td>
</tr>
<tr>
<td></td>
<td>The antimicrobial effects of honey and other bee-derived products - Dr. Saira KHAN</td>
<td>Cardiff University, Cardiff, UK</td>

CURRENT RESEARCH TOPICS IN PHARMACY: 
Microbiology Debates

December 14th, 2022 14.00 PM ISTANBUL

ORGANIZING & SCIENTIFIC COMMITTEE
Editorial Board of Journal of Research in Pharmacy
https://www.jrespharm.com/

Eva Tatari
(Vice Chair of Organizing Committee)
Marmara University, Istanbul, Turkey

Levent Kabasakal
(Vice Chair of Organizing Committee)
Marmara University, Istanbul, Turkey

Ayşe Nur Hazar Yavuz
(Secretary)
Marmara University, Istanbul, Turkey

Abdulkarim Mohammed Abdil
Yeditepe University, Istanbul, Turkey

Afife Büyük Üçer Kaplan
Akaltın University, Erzurum, Turkey

Ahmet Erten
Ege University, Izmir, Turkey

Ali Demir Sezar
Marmara University, Istanbul, Turkey

Ammad Ahmad Farooq
Institute of Biomedical and Genetic Engineering (IBGE), Islamabad, Pakistan

Ana V. Pașcić
University of Novi Sad, Novi Sad, Serbia

Anna Iliani
Università degli Studi di Chieti-Pescara, Chieti, Italy

Andrea Gnecchi
Università degli Studi di Chieti-Pescara, Chieti, Italy

Aytayr Baceri
Marmara University, Istanbul, Turkey

Ayşe Ebru Kirazalp
Istanbul Medipol University, Istanbul, Turkey

Ayşen Günüş Akyıldız
Bezmialem Vakıf University, Istanbul, Turkey

Bahadir Bülüt
Düzce University, Düzce, Turkey

Betül Okuyan
Marmara University, Istanbul, Turkey

Binşra Ertüş
Marmara University, Istanbul, Turkey

Ceren Erten
Ege University, Izmir, Turkey

Claudio Ferrari
G. d’Annunzio University of Chieti-Pescara, Chieti, Italy

Deniz Kayar
Marmara University, Istanbul, Turkey

Dinesh Kumar
Indian Institute of Technology (IIT), Varanasi, India

Enkapsu Gözi
Aldent University, Tirana, Albania

Enes Halıcı
University of Medicine, Trabzon, Turkey

Erkan Ruyman
Marmara University, Istanbul, Turkey

Güzin Tatar Yılmaz
Karadeniz Technical University, Trabzon, Turkey

Gülberk Uçar
Hacettepe University, Ankara, Turkey

Gülgün Tınaz
Marmara University, Istanbul, Turkey

Gülşah Gedik
Trakya University, Edirne, Turkey

Hamide Sena Özbay
Hacettepe University, Ankara, Turkey

Hasan Erdinç Selitxo
Karadeniz Technical University, Trabzon, Turkey

İrem Tati Çerkes
Hacettepe University, Ankara, Turkey

İrem Buran
University of Health Sciences, Istanbul, Turkey

Khodija Ochamo
Aldent University, Tirana, Albania

Lejla Kepo
University of Sarajevo, Sarajevo, Bosnia and Herzegovina

Lorina Mesmajah
Aldent University, Tirana, Albania

Maja Orčin Hadžidžić
University of Zagreb, Zagreb, Croatia

Mehmet Kabasakal
University of Health Sciences, Istanbul, Turkey

Mecit Sancar
Marmara University, Istanbul, Turkey

Miroslav Mirkić
University of Medicine, Trabzon, Turkey

Mohd Younas Rathore
Government Medical College Srinagar, Srinagar, India

Murat Doğan
Çanakkale Onsekiz Mart University, Sivas, Turkey

Nurcan Tekin
University of Health Sciences, Istanbul, Turkey

Nurdin Yavuz
Karadeniz Technical University, Trabzon, Turkey

Ongun Mehmet Saka
Ankara University, Ankara, Turkey

Öya Kerimoğlu
Marmara University, Istanbul, Turkey

Pablo Minsha Ibarra
University of Valencia, Burjassot, Spain

Pınar Talya Pınar
Yüzüncü Yıl University, Van, Turkey

Rezaa Shirmish
Aldent University, Tirana, Albania

Rİmeyya Kılıç Kaya
Sakarya University, Sakarya, Turkey

Sadeh Sołtanı
Istanbul University of Medical Sciences, Istanbul, Iran

Sahine Tuncay Terüresvet
Ege University, İzmir, Turkey

Simone Carradori
G. d'Annunzio* University of Chieti-Pescara, Chieti, Italy

Somayeh Sołtaní
Tabriz University of Medical Sciences, Tabriz, Iran

Selim Durak
Sarajevo School of Science and Technology, Sarajevo, Bosnia and Herzegovina

Turgut Taşkin
Marmara University, Istanbul, Turkey

Uğur Karagöz
Trakya University, Edirne, Turkey

Üzüla Yaman
Koçs̄el University, İzmir, Turkey

Viktoria Maksonova
Gose Delux University, Bit, Republic of N. Macedonia

Vildan Celiksoy
Cardiff University, Cardiff, UK

Yeliz Sabir
Marmara University, Istanbul, Turkey

Zahra Amer Hashim
Mosul University, Mosul, Iraq

Zaira Althaconn
Mosul University, Mosul, Iraq

Zoran Žeković
University of Novi Sad, Novi Sad, Serbia

Online Symposium

Journal of Research in Pharmacy
An international open-access journal of pharmacy and pharmaceutical sciences
Formerly published as Marmara Pharmaceutical Journal

Antibiotics are medicines used to prevent and treat bacterial infections. Antibiotic resistance occurs when the response of bacteria to medicines. Unfortunately nowadays the emergence of resistance among bacterial pathogens is a major public worldwide health problem. Antibiotic resistance is a vital problem since it concerns human, animals, plants and environmental factors.

Additionally, multidrug-resistant organisms have emerged not only in the hospital but also in the community. The presence of antibiotic-resistant bacteria reservoirs outside the hospital is a worldwide issue which concerns many scientist. Moreover, according to the World Health Organization (WHO) antibiotic resistance is one of the 3 most important public health threats of the 21st century. Furthermore, according to Centers for Disease Control and Prevention (CDC) antibiotic resistance is estimated to cause around 300 million premature deaths by 2050, with a loss of up to $100 trillion (£64 trillion) to the global economy.

As it is known the mechanisms of antimicrobial resistance are modifications of the antimicrobial target, Enzymatic degradation of antibacterial drugs, changes in membrane permeability to antibiotics, changes in important metabolic pathways, activation of efflux mechanism.

During the modifications of the antimicrobial target in order to avoid the action of the antibiotic bacteria have evolved different tactics one of which is target protection (avoiding the antibiotic to reach its binding site) and the other one is modifications of the target site which results in decreased affinity for the antibiotic molecule. For example drugs affected by this mechanism include tetracycline (Tet[M] and Tet[O]), fluoroquinolones (Qnr) and fusidic acid (FusB and FusC) during target protections. The methicillin resistance seen in Staphylococcus aureus due to replacement of an exogenous PBP (PBP2a) and vancomycin resistance in enterococci is an example of replacement or bypass of the original target.

The β-Lactamases, macrolide esterases and aminoglycoside acetyltransferases are take place in enzymatic degradation of antibacterial drugs. Many of the antibiotics used in clinical practice have intracellular bacterial targets. Therefore, the compound must penetrate the outer and/or cytoplasmic membrane in order to exert its antimicrobial effect. β-lactams, tetracyclines and some fluoroquinolones are particularly affected by changes in permeability of the outer membrane. Also one of the most important mechanisms of antimicrobial resistance is the activation of efflux mechanisms. Many classes of efflux pumps have been characterized in both gram-negative and gram-positive pathogens. It is known that more than 20 different tet genes cause tetracycline resistance. Additionally, MDR efflux pumps like AcrAB-TolC in Enterobacteriaceae and MexAB-OprM in P. aeruginosa are able to extrude tetracyclines (including tigecycline) as part of their contribution to multidrug resistance.

In order to combat with antibiotic resistance one should protect him or herself and also his or her family. As it is known infections caused by multi-drug antibiotic-resistant germs are quiet difficult, and sometimes impossible to treat. However we can help stop the spread of these microorganisms. Normally, antibiotic resistance happens when microorganisms like bacteria and fungi develop the ability to defeat the drugs designed to kill them. People can not completely avoid getting an infection, but there are few precautions that you can take in order to reduce infection risk. These are, washing hands, getting vaccinated, using antibiotics appropriately, preparing food safely, being vigilant when traveling abroad and preventing sexually transmitted diseases.
Consequently, antibiotic resistance is a worldwide problem which concerns many scientists since combating with it getting hard day by day. Merely, if the necessary precautions mentioned about are taken, antibiotic resistance could be minimalized.

**Keywords:** Antibiotic resistance, multidrug-resistant organisms, efflux mechanisms.
